

Why AddonSoftware?

Allow us to introduce ourselves. **AddonSoftware®**, a software organization – *big and stable* enough to act as a reliable partner to thousands of companies across the United States – *small and flexible* enough to find customized solutions to problems – *open* enough to build up a wide network of partners for whom our products have formed the foundation for new, efficient, and timely software solutions. AddonSoftware, unleashing **The Freedom to Grow®** for more than 25 years.

“I run two gasket manufacturing firms in two states with AddonSoftware. Our product line has over 14,000 part numbers, many of which require second and third operations as well as component-kitting. Whether it’s Accounting, Sales Analysis, Bill of Materials, or Shop Floor Control, we’ve found the new AddonSoftware to be the perfect ERP for us. It’s very easy to use and the new reporting features are invaluable. With robust and simple to use reporting in every module, we can quickly access the information we need. With these reports, we are equipped to make informed business decisions and avoid costly mistakes.”

Ryan Hunter
President

SCE Gaskets, Inc., SPM Gaskets, LLC

Reasons to Choose AddonSoftware

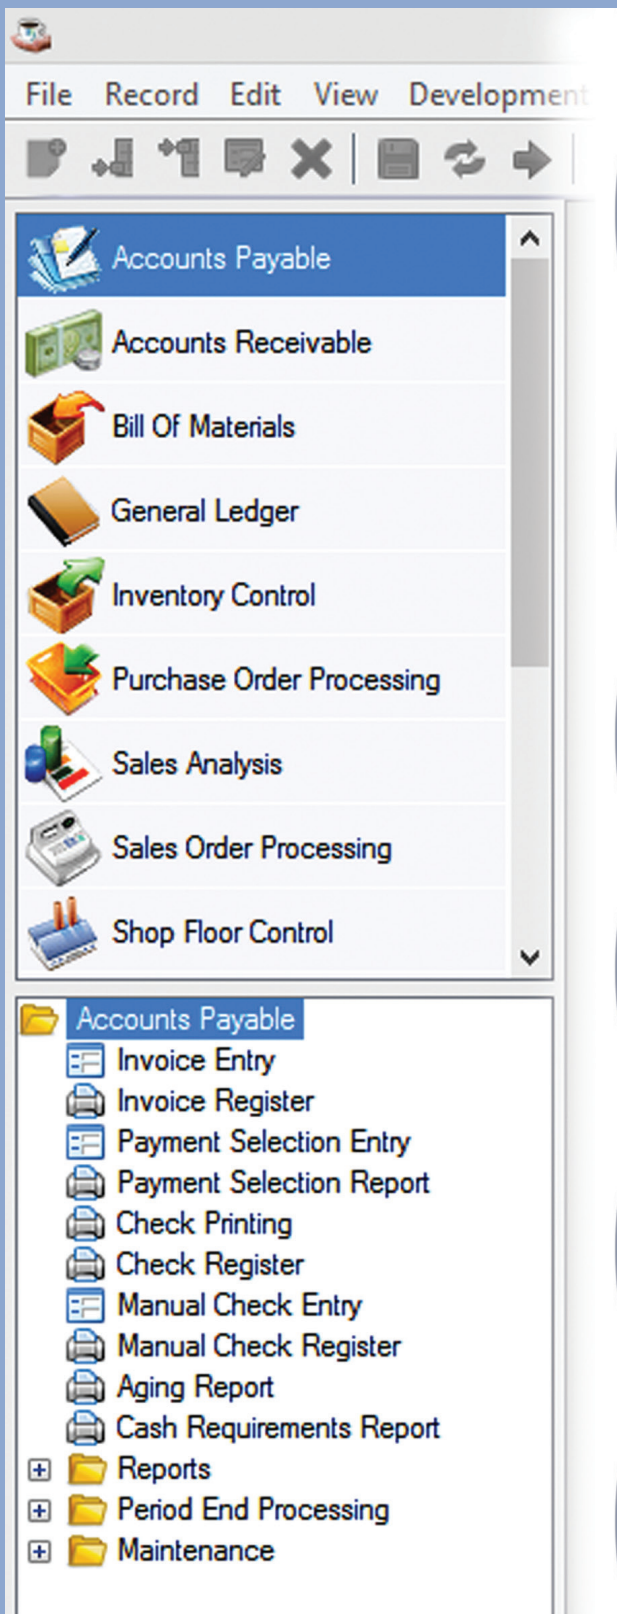

Product Choices

AddonSoftware is an affordable, full-featured, and fully integrated business management solution. We offer scalable deployment options to fit your needs and budget while providing the core enterprise resource planning features that currently support many businesses like yours. Full integration eliminates the cost of multiple stand-alone applications and the resulting redundant data entry. With AddonSoftware, you select the licensing, define the number of users, and choose the functionality you need.

- **Accounting**
Accounts Payable, Accounts Receivable, and General Ledger
- **Distribution**
Inventory Control, Sales Order/Invoice Processing, Purchase Order Processing, and Sales Analysis
- **Manufacturing**
Bill of Materials and Shop Floor Control

Deployment Choices

Platform independence means that choosing AddonSoftware does not dictate your operating system nor does it prevent you from changing your system at a later date. You can mix and match client and server operating systems. For example, engineering can run on Linux clients, the creative department on Apple clients, the finance department on Windows clients, and the IT department can choose their preferred server operating system. Live in whatever world you choose.

Development Choices

Tailoring your business software solution to match your workflow and industry practice is a critical element to a successful implementation. AddonSoftware includes the powerful and efficient data dictionary-driven customization tool, Barista®, at no additional cost. There is no need to redevelop current software customizations. As your business grows and your requirements change, you can upgrade, adapt, and efficiently add further customizations.

Acquisition Choices

A national network of software partners delivers AddonSoftware with personal service, local support, and acquisition options to meet your business requirements. In addition to the traditional purchase, AddonSoftware offers an aggressively priced annual rental option to significantly lower the cost of your up front investment.

Tool Choices

There is no need to buy expensive third party applications for the reporting and analysis that you require. AddonSoftware delivers built-in reporting and analysis tools as well as PDF, e-mail, and fax output choices. If you should require additional capabilities, you can easily integrate commercial reporting tools.

The choices are yours!
